

Appendix

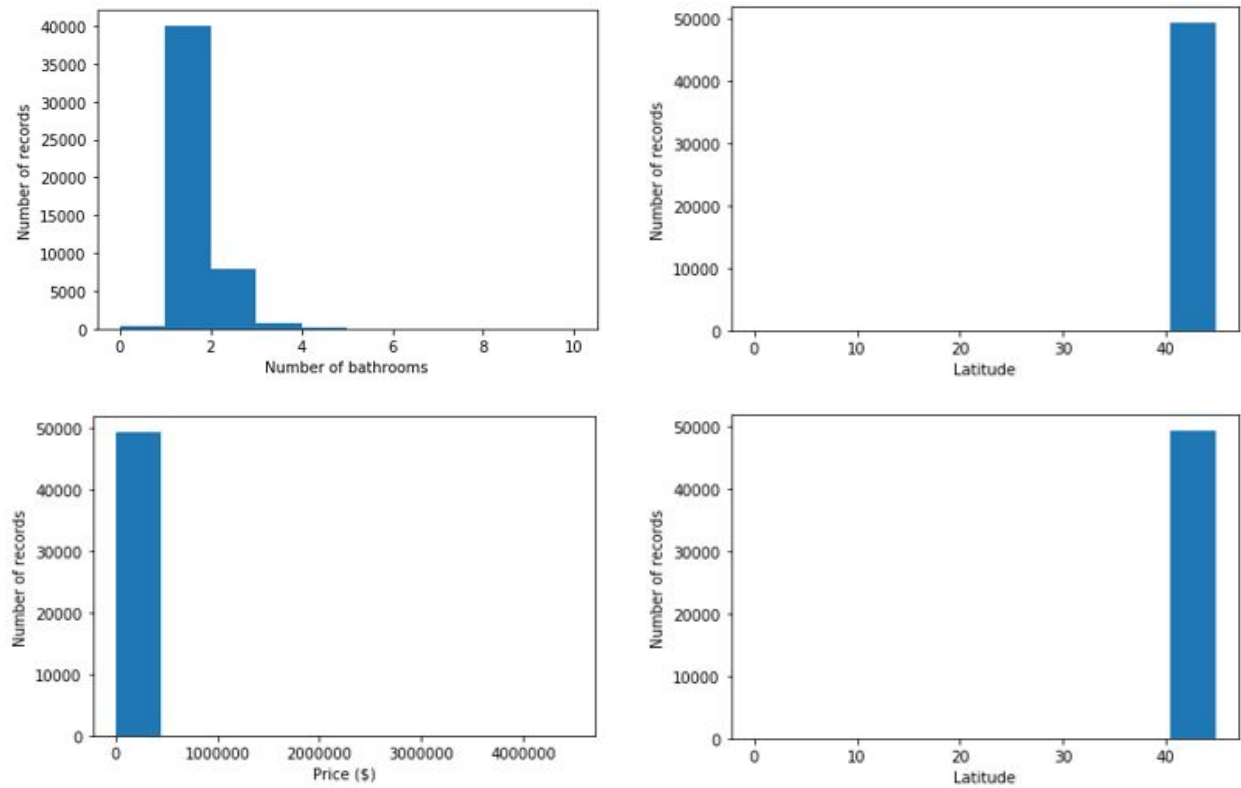

A. Correlation rank of the numerical attributes in the initial dataset

interest_level_num	1.000000
bedrooms	0.074349
longitude	0.032485
bathrooms	-0.020075
latitude	-0.027469
price	-0.202009

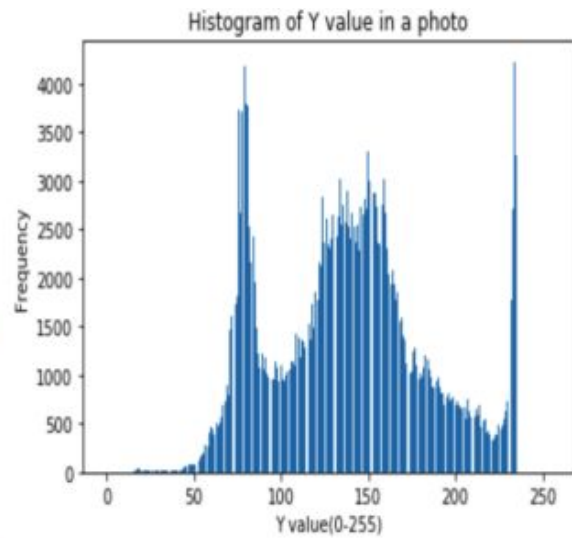

B. Boxplots of the numerical attribute in the initial dataset.

C. Histograms of the attributes in the initial dataset before outlier removal

D. Image extraction process

(E.g Features extracted using OpenCV)

E. Frequency of features from text extraction.

F. Manager skills and rent price by interest level

Manager Skills by Interest Level Classes

For high interest level:

The average manager skill is 0.0352

The median manager skill is 0.0000

The standard deviation is 0.4336

The sum of all the manager skill is 100.27

The dataset has 2849 number of records

For medium interest level:

The average manager skill is -0.1921

The median manager skill is -0.2237

The standard deviation is 0.3745

The sum of all the manager skill is -1651.61

The dataset has 8596 number of records

For low interest level:

The average manager skill is -0.6515

The median manager skill is -0.7188

The standard deviation is 0.3397

The sum of all the manager skill is -16262.66

The dataset has 24961 number of records

Rent Price by Interest Level Classes

For high interest level:

The average rent price is \$ 2589

The median rent price is \$ 2495

The standard deviation is \$ 777

The dataset has 2849 number of records

For medium interest level:

The average rent price is \$ 2869

The median rent price is \$ 2759

The standard deviation is \$ 772

The dataset has 8596 number of records

For low interest level:

The average rent price is \$ 3184

The median rent price is \$ 3090

The standard deviation is \$ 877

The dataset has 24961 number of records

G. Correlation heat map with additional attributes
